# Content Migration

Sound familiar?

- Is the idea of having to migrate hundreds of thousands of web pages of content onto a new system keeping you awake at night?

- Do you dread the thought of spending months or even years manually migrating the content of your websites?

- Do you long for a solution that dramatically reduces the time and manual effort needed for a migration project?

With Terminalfour's automated tool content migration is a relative breeze! You can quickly migrate hundreds of websites in just days, easily control what content you want to migrate and even strip out the design before migrating. It couldn't be easier.

Some CMSs we've migrated from include…

- OmniUpdate
- Cascade Server
- RedDot
- Percussion
- Interwoven
- Vignette
- Drupal
- Plone
- Wordpress
- Drupal

- OpenText
- Ektron
- Squiz
- CommonSpot
- Ingeniux
- Sitecore
- Manually developed sites
- Custom developed CMSs

Benefits

- Migrate hundreds of thousands of webpages in just a matter of days
- Strip out design vs content so you can just migrate over basic content if you have a new design in place
- Decide how much content you want to migrate each time
- Save time, money and heartache

- Directly map Content Types from one system to another
- Migrate in phases
- Updates links as content is migrated
- Clean content as you migrate
- Easily rollback migrations to quickly improve the migration configuration
