

The ultimate goal of any website or portal should be to ensure that it's open and usable for users of all abilities.

For higher education websites this is especially true as they have to cater for a diverse range of users. Institutions need to guarantee that websites are designed with flexibility and usability in mind. They also need to deliver equal access for all users and from a practical standpoint universities and colleges often have to meet certain standards of accessibility to ensure they receive the necessary funding to complete projects.

TERMINALFOUR is fully compliant with WCAG/WAI-AAA, DDA, ATAG or Section 508 standards and has built accessibility into every facet of our product at every level down to our own administrative interface. Our product automatically identifies accessibility issues so you can solve them before they become an issue.

Benefits

- Easily automate the creation and maintenance of WCAG/WAI-AAA, DDA or Section 508 compliant sites
- Accessibility reporting tool to automatically identify issues
- Complete pixel perfect control over styles and templates at an administrator level
- Output can meet the highest W3C standards
- Compulsory fields where required (i.e. ALT tags, LONGDESC etc.)
- Ability to restrict users so they can only use appropriate CSS styles
- Fully compliant HTML editor
- Build accessible online forms
- Built-in accessibility check to allow you to check the accessibility compliance of each page and in turn the website as a whole
- Lock down rules so users can only publish accessible content
